145 205 265 476 445 264 324 384 325 444 385 534 594 565 654 human tumours and tumour cell lines, but functional inactivation of the p53 pathway occurs in a much larger proportion of the p53 gene remains unknown but p53 has been found to act in cooperation with INGI. Functional cooperation between INGI and p53 suggested that INGI encoded a tumour suppressor protein that functional within the p53 pathway. This data suggested a possible role for INGI head within the p53 pathway. This data suggested a possible role for INGI head within the p53 pathway. This data suggested a possible role for INGI head and neck cancers and chromosomal location of the INGI placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving INGI has not revealed mutations in INGI nor significant variations in its expression suggesting that INGI was not a useful gene to study in cancer etiology. However, alternative initiation exons of the ingicane, each having their own promoter have been discovered. Expression of a second promoter (1b) produces a protein has been identical c-terminal fragment to INGI but an additional 104 N-terminal anino acids. The newly discovered protein has been characteristics of an oncogene When overexpressed in cells (even those expressing wild type; p33INGI). p37INGI has the characteristics of an oncogene. When overexpressed in cells cancer choiceration or transformation of those cells. Thus detecting a proleic acid encoding exon 1b of ingl by hybridisation with an isolated nucleic acid having the sequence of exon 1b of ingl the GCGCCAGCAGCAGCTGGGCGACAGGTGGGCAACAGCGGCAAGGTTGGCGCGGACAGGCC 266 GCAGCGCGCGCTGATCCGCAGCAGCAGCAGGAGAAGATCCAGATCGTGAGCCA ------CTGCTGAAAGTGAACGAGCCTCAGATA 86 CTATGTGGAGGACTACCTGGACTCCATCGAGTCCCTGCCTTTCGACTTGCAGAAATGT GTCTGTGCTGCGAGAGCTGGACAACAAATATCAAGAAACGTTAAAGGAAATTGATGTT 385 AATGCTCGAATTGGTGGAAAATCGGGCAAGACAAATGGAGTTACACTCACAGTGTTTCCA AAGCAAAGATGGATTCCAGCCAACCAGAAAGATCTTCAAGAAGACCCCGCAG--GCAGCG 446 CAATGGCGATGCGGTAGCGCAGTCTGACAAGCCCAACAGCGAAGCGCTCACGGCGGCGCAGCG GACCAGTGAAAGCCGTGATTTATGTCACATGGCAAATGGGATTGAAGACTGTGATGATCA CAACAACGAGAACCGTGAGAACGCGTCCAGCAACCACGACCACGACGACGCCCTCGGG GCCACCTAAAGAAAAGCCAAGTCCAAGTCAGCAAAGAAAAGGAAACGCTCCAAGGCCAAGCA CTACGAAAAATATAAGAAAGAAGATGATTTAAAACCAGAAGAAAGGTCTACAGCAGCTTCT 206 CTACGAGCGCTTCAGTCGCGAGACAGACGGGGCGCGGAAGCGGCGGATGCTGCACTGTGT CTACGTGCAGGACTACCTTGAGTGCGTGGAGTCGCTGCCCCACGACGTGCAGAGGAACGT Gaps or its antisense sequence can identify individuals expressing the oncogenic form of ingl. Novel peptide sequences taken from the 104 Noterminal peptide of p37ING1 can also be used to raise antibodies that can also be used in detection methods for the p37ING1 variant The polypeptides may be useful in gene therapy for treatment of cel. 30; Length Indels Sequence 911 BP; 228 A; 255 C; 305 G; 123 T; 0 other; The polypeptides may be useful in gene therapy for t proliferation disorders, especially cancers and for DB 21; Score 237.4; DB 21, Pred. No. 1.9e-44; ; 0 22.0%; Conservative 445 AGATC-----Similarity cancers.

The present sequence encodes a human cancer associated antigen. The sequence is a variant of the ING1 gene, which is a tumour suppressor gene candidate. The cancer associated antigen polynucleotides and polypeptides are useful for screening for the possible presence of a pathological condition in a subject such as cancer. The cancer associated antigen polypeptides are useful for producing vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    145 CTACGTGCAGGACTACCTTGAGTGCGTGGAGTCGCTGCCCCACGACATATGCAGAGGAACGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention discloses monoclonal antibodies which can be used, in combination, to specifically recognise epitopes of ING1 (inhibitor of growth 1) protein isoforms. ING1 is a tumour suppressor gene and its expression is regulated through the cell cycle, peaking in the S phase. Expression of ING1 is down regulated in breast tumours and lymphoid malignancies. Overexpression of a construct containing the ING1 pene is able to inhibit cell growth by reducing the fraction of cells which enter into the S phase. The monoclonal antibodies are useful for detecting an ING1 protein in a cell, which involves selecting a cells that ectopically or endogenously expresses ING1 protein. The anti-ING1 monoclonal antibody combination consists of two or more antibodies of CAD1-CAD10 (not defined), preferably a mixture of CAD1-CAD4, which can detect at least two different isoforms of ING1. The antibodies are also useful for diagnosing a disease e.g. tumour or medical condition in an animal preferably, human) associated with aberrant levels of an ING1 protein. The sequence presented is the human inhibitor of growth I (ING1) isoform, protein used to raise antibodies.
                                                                                                                                                                                                                    malignancy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel monoclonal antibody which specifically recognizes epitope of ING1, inhibitor of growth 1 protein, and designated CAb1-10, useful for detecting two different isoforms of ING1 and diagnosing a medical condition

This data suggested a possible role for ING1 in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not within a region that is frequently rearranged in head and neck cancer etiology. However, alternative initiation exons of the ing1 expression suggesting that ING1 mas not a useful gene to study in cancer etiology. However, alternative initiation exons of the ing1 ene, each having their own promoter have been discovered. Expression of one promoter (1a) produces a protein land of the ing1.

Expression of one promoter (1a) produces a protein having an identical C-terminal fragment to ING1 but an additional 104 networe expression of a second promoter (1b) p37ING1 has the characteristics of an oncogene. When overexpressed in cells (even those expressing wild type p33 p7ING1; ability the cancer of exon 1b of ing1 by hybridisation with an isolated nucleic acid encoding exon 1b of ing1 by hybridisation with an isolated nucleic acid encoding exon 1b of ing1 by hybridisation with an isolated nucleic acid maving the sequence of exon 1b of ing1 or its antisense sequence can identify individuals expressing the cancer in identify individuals expressing the polypeptides may be useful in gene therapy for treatment of cell studies and be used in det
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7 TGAAGGAGCTGGACGACTACTATGAGAAGTTCAAACGGGAACAGACGGCACCCAGAAAGC 66

                                                                               The sequence is the wildtype of the ING1 gene, which is a tumour suppressor gene candidate. The cancer associated antigen polynucleotides and polypeptides are useful for screening for the possible presence of a pathological condition in a subject such as cancer. The cancer associated antigen polypeptides are useful for producing vaccines.

                                                                                                                                                                                                                                                                                                                                                                                                          hybridisation between normal mammary and transformed epithelial CDNAs, isolation of an antisense ING1 CDNA insert that caused increased cell proliferation, and use of the insert to screen normal human fibroblast and HeLa CDNA libraries. A complete ING1 sequence (AAT69652) was obtd. by 5'RACE. ING1 is localised to the 13433-34 chromosome region, to which a number of human cancers have been mapped. ING1 nucleic acids can be used in the diagnosis of breast cancer; a decreased level of ING1 mRNA indicates cancerous cells. They can also be used in gene therapy methods to block the

                                         novel 33 NDa tumour suppressor protein p33ING1 (AAW1919), formerly p33IG1, that is a potent inhibitor of cell growth. A partial clone (AAT69651) was isolated by subtractive hybridisation between normal mammary and transformed epithelial cDNAs, isolation of an antisense ING1 cDNA insert that caused increased cell proliferation, and use of the insert to screen normal human fibroblast and HeLa CDNA ilbraries. The complete ING1 sequence was then obtd. by 5'RACE. ING1 is localised to the 13q33-34 chromosome region, to which a

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 50 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as'it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (19-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: Estimated insert size may differ from sequence length (see http://www hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 69 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Jp ln
